ABOUT ME

DevOps Engineer and Linux System Administrator with over five years of experience managing high-availability infrastructures, deployment pipelines, and backend operations. Proficient in a wide range of DevOps tools, including Kubernetes, Docker, Jenkins, Ansible, and monitoring solutions like Prometheus and Grafana. Extensive experience with AWS services such as EC2, S3, CloudWatch, Route 53, and Load Balancers. Skilled in automation, scripting (Bash, Python), and optimizing deployments to ensure seamless operations. Strong communicator with a proven track record of collaborating with cross-functional teams and providing L2/L3 support in dynamic, fast-paced environments.

WORK EXPERIENCE

Senior DevOps Engineer

Global Financial Media [01/06/2024 – Current]

City: RAWALPINDI | **Country:** Pakistan

Currently focused on ensuring high service availability through infrastructure maintenance, automated deployments, and R&D on new tools to streamline projects. Leading backend operations, collaborating with cross-functional teams to address infrastructure needs, implementing effective monitoring and logging systems, and troubleshooting to deliver timely fixes.
Proficient in a wide range of monitoring tools, including Nagios, Zabbix, Icinga2, Grafana, Prometheus, ELK, Checkmk, Pingdom, and SolarWinds, ensuring efficient system performance and uptime. Experienced with testing tools like K6 and Locust for performance benchmarking. Skilled in managing Linux environments (Ubuntu, Debian, CentOS, RedHat, Rocky Linux) and Windows Server platforms (2012R2, Active Directory). Hands-on expertise with cloud platforms, including AWS (EC2, Route 53, Load Balancer, Lambda, CloudWatch, S3, EKS, VPC, IAM). Adept at utilizing DevOps tools such as Kubernetes, Docker, Jenkins, Ansible, and PM2, alongside scripting languages like Bash, Shell, and Python. Proficient in managing web servers (Apache, Nginx), HA tools (HAProxy), and application servers (Apache Tomcat, IIS). Experienced with database management, including MySQL and MariaDB installation, configuration, and optimization. Skilled in programming languages for deployments, including .NET, Java, React, Angular, and Node.js, and proficient in virtualization tools such as Proxmox, Hetzner, and INAP. Expertise extends to version control using Git and GitHub, along with managing platforms like Sonassi etc.

Assistant Manager DFS

Zindigi [2023 – 2024]

City: islamabad | **Country:** Pakistan

Managed backend operations in a FinTech environment, ensuring high availability for the Zindigi app. Provided L2/L3 support for infrastructure and application needs, collaborated with internal teams, and coordinated with developers to ensure seamless deployments.

DevOps Engineer

Mercurial Minds [2019 – 2023]

City: islamabad | **Country:** Pakistan

Managed VAS services, including installation, configuration on Asterisk and AGI systems, and database management. Successfully led the end-to-end deployment of two VAS services, coordinating with client POCs for seamless execution and issue resolution. Played a key role in the OTT Jazz Tamasha project, overseeing backend operations and deployments. Additionally, managed the Level 1 support team and trained them in troubleshooting skills.

PROJECTS

[2022 – 2023]

Tamsaha

OTT Jazz Tamasha Project: Contributed to the platform's backend operations, enhancing deployments and streamlining processes in collaboration with developers. Played a key role in ensuring high availability and seamless streaming by managing over 100 app servers and 60+ CDN servers. Successfully organized the World Cup event streaming, serving over 1.5 million users on the platform.

[2020 – 2022]

VAS Services

VAS Services: Led the deployment of value-added services across multiple environments, managing databases and all related components to successfully meet client requirements.

[2022 – 2023]

OJS App on Kubernetes

To meet the client's requirement for deploying the app on a monolithic Kubernetes setup, I independently implemented the entire project from scratch. This involved creating the infrastructure with two master nodes and three worker nodes, deploying the web application, setting up the database, and integrating it outside the cluster using ConfigMaps and Secrets to ensure data security. Successfully delivered the demo to the client.
