Muhammad Awais Aslam

Nationality: Pakistani **Date of birth:** 28/03/1999 **Gender:** Male

Phone number: (+92) 03041822862

Email address: dr.m.awais003@gmail.com

LinkedIn: https://www.linkedin.com/in/muhammad-awais-aslam-7288432b3/

Home: 44000 Rawalpindi (Pakistan)

ABOUT ME

I am an AWS Certified DevOps engineer with 4+ years of experience in Linux, and cloud infrastructure. RHEL Certified, I specialize in automation, Docker, and AWS, optimizing workflows and system reliability.

WORK EXPERIENCE

Global Financial Media – Islamabad, Pakistan

City: Islamabad | **Country:** Pakistan

Sr. Platform Engineer

[01/2025 – Current]

Recognizing my expertise, exposure, and proven skills as a DevOps Engineer, I was recently promoted within the same organization to take on an advanced role with expanded responsibilities, further contributing to strategic initiatives and operational excellence.

- Working with java applications, tomcat servers and monitoring application logs via **APM**.
- Managing **cluster mails servers** using postfix as rely hosts to ensure security and streamlined flow and track of mails.
- Setting up Live Streaming servers using open-source tools and also working with **IVS**
- Implemented company wide servers security as a part using **SSO** to trace back activities over live servers.
- Implemented **RBAC** level control for team members to access servers and resources.
- Creating production grade DevSecOps **CICD** pipelines for secure and easy rollouts and quick rollbacks.
- Created hybrid environment using various clouds and setting up hypervisors to **cut the compute cost** of running servers (for DEV and UAT environments).

Global Financial Media – Islamabad, Pakistan

City: Islamabad | **Country:** Pakistan

DevOps Engineer

[07/2024 – 12/2024]

- Built and maintained **CICD** pipelines using Jenkins, Bitbucket, and GitHub, enabling seamless code integration and delivery.
- Provisioned and managed **AWS** resources (EC2, Lambda, EBS, EFS, S3, Route 53, CloudFront) for scalable and secure architectures.
- Configured security groups, **IAM** roles, policies, and multi-account structures to ensure secure cloud operations.
- Implemented auto-scaling and load balancing (**ALB**) to optimize performance and availability.
- Automated infrastructure setup and configuration using **Ansible**.
- Containerized applications using **Docker** and managed workloads with ECS and ECR for high availability.

- Deployed multi-tier apps in Docker Swarm, ensuring efficient resource utilization.
- Centralized monitoring with **ELK**, **Prometheus**, **Grafana**, **Nagios**, Monit, and Checkmk for performance and security insights.
- Automated SSL certificate management with Certbot, AWS Certificate Manager, and Ansible.
- Enhanced security and performance with **WAF** rules, **Cloudflare** configurations, and DNS migration to AWS Route 53.
- Managed PostgreSQL databases with secure access, backups, and disaster recovery protocols.
- Automated routine tasks and monitoring setups with **Bash** scripting, improving operational efficiency.

Al Nafi Cloud – Karachi, Pakistan

City: Karachi | **Country:** Pakistan

J. Devops Engineer

[04/2022 – 06/2024]

- Utilized **AWS** tools, including EC2, Lambda, EBS, EFS, S3, Load Balancers, Security Groups, IAM (Users, Roles, Policies, Groups), ECS, ECR, Route 53, CloudFront, SES, AWS Certificate Manager, and CloudWatch.
- Managed system patches, kernel management, and network configurations.
- Handled user management, ownerships, **advanced permissions** (SUID, SGID, STICKYBITS, SUDOERS, UMASK, CHATTR, SETFACL), and firewalls/security groups.
- Installed and configured file-sharing services like NFS and Samba and file transfer services like FTP.
- Configured and managed **Apache** and **Nginx** servers for web hosting and reverse proxy setups, ensuring high availability using keepalived.
- Specialized in containerization using Docker, deploying multi-tier applications as microservices in Docker Swarm.
- Automated **CI/CD** pipelines using GitHub Actions, GitLab, and **Jenkins**, integrating pull and build operations via VCS **webhooks**.
- Configured and managed **MySQL** databases for multi-tier application deployments.
- Deployed **Ansible** as a configuration management tool for system-wide automation and maintenance.

TechBoss – Faisalabad, Pakistan

City: Faisalabad | **Country:** Pakistan

System Administrator

[02/2021 – 03/2022]

- Installed, configured, and troubleshot **hypervisors** (bare-metal and type 2) and Fedora/Debian-based operating systems.
- Set up and configured **SSH**, ownerships and permissions, advanced permissions, and user management.
- Managed runlevels/targets and added storage from LUN Scanning/SAN, including partitioning and Logical Volume Management (**LVM**).
- Scanned and resolved bad blocks, performed backups using rsync, and automated tasks with the crond **scheduler**.

EDUCATION AND TRAINING

Bachelor of science in Computer Science

University of Agriculture [2018 – 2022]

City: Faisalabad | **Country:** Pakistan

CERTIFICATIONS

[03/2025 – 2026]
ISC2 Candidate

[03/2025]
AWS Educate Introduction to Generative AI

[08/2025]
AWS Certified Cloud Practitioner

[09/2025]
AWS Certified Solutions Architect - Associate

PROJECTS

[01/2025 – 02/2025]
Identity-Centric Server Access Control with RBAC & SSO Integration
Tools: Okta/Auth0, HashiCorp Vault, AWS IAM, LDAP, Kubernetes RBAC, SSH Certificate Authority

- Designed a **Zero Trust security model** by enforcing **RBAC policies** for server access via **SSO (Okta/Auth0)**.
- Replaced static SSH keys with **short-lived certificates** using **HashiCorp Vault**, reducing breach risks by **70%**.
- Configured **Kubernetes RBAC** with granular namespace-level permissions aligned with AD/LDAP groups.
- Automated user provisioning/deprovisioning via **SCIM** to ensure compliance with SOC2 audits.
- Implemented **just-in-time (JIT) access** with approval workflows for privileged sessions (e.g., production DBs).

[05/2025 – 06/2025]
Low-Latency Live Streaming Infrastructure with NGINX-RTMP
Tools: NGINX RTMP module, FFmpeg, Docker, Kubernetes (EKS), Terraform, S3, CloudFront

- Designed and deployed a **self-managed RTMP ingestion platform** using **NGINX with RTMP module**, enabling sub-5-second latency for live video streams.
- Optimized **FFmpeg transcoding pipelines** to dynamically convert streams into multiple resolutions (1080p/720p/480p), reducing bandwidth costs by **25%** through adaptive bitrate tuning.
- Containerized the streaming stack using **Docker** and orchestrated it on **Kubernetes (EKS)** with Terraform, ensuring high availability during traffic spikes (10,000+ concurrent viewers).
- Implemented **secure uploads** with RTMP authentication tokens and archived streams to **S3** for VOD (Video-on-Demand) workflows.
- Leveraged **CloudFront CDN** with geo-blocking rules to mitigate DDoS attacks and enforce regional content restrictions.

[05/2025 – 05/2025]
Cloud-Native Video Streaming with AWS IVS & Serverless Scaling
Tools: AWS IVS, Lambda, MediaConvert, CloudFront, Terraform, Prometheus

- Migrated legacy RTMP workflows to **AWS Interactive Video Service (IVS)** to leverage managed HLS/DASH streaming, eliminating 70% of operational overhead in encoder maintenance.

- Built a **serverless ingestion pipeline** using **Lambda triggers** to automate IVS channel creation/deprocessing, scaling dynamically with viewer demand.
- Integrated **AWS Elemental MediaConvert** for post-live video processing (e.g., clipping highlights) and stored outputs in S3 with lifecycle policies for cost optimization.
- Monitored stream health end-to-end using **CloudWatch Metrics and Prometheus**, reducing viewer buffering incidents by **40%** through QoS optimizations.
- Enforced content security via **CloudFront signed cookies** and IAM roles to restrict access to premium streams.

[09/2024 – 10/2024]

End-to-End Application Performance Monitoring (APM) with Distributed Logging

Tools: ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, OpenTelemetry, Fluentd, AWS CloudWatch

- Architected a **centralized log aggregation system** using **ELK Stack** and **Fluentd** to process logs fro m microservices.
- Deployed **Prometheus & Grafana** for real-time metrics monitoring, reducing incident response time by **40%**.
- Implemented **OpenTelemetry** for distributed tracing across Kubernetes pods, improving visibility into latency bottlenecks.
- Automated alerting thresholds in **PagerDuty** and Slack to proactively resolve critical issues (e.g., 5xx errors, high CPU).
- Reduced log storage costs by **25%** via log retention policies and CloudWatch log archiving to S3 Glacier.
