# ABDUL MUSAWAR

+92 3064755002 · abdulmuswardevops@gmail.com
https://www.linkedin.com/in/abdul-musawar-26474b209
Islamabad,Pakistan

## PROFESSIONAL SUMMARY

- Worked on Dockers Including Docker Installation, Creating Images and Containers.
- Experience in developing Docker Compose file for multi container application.
- Experience in Docker container management like Volumes,docker compose,docker swarm,network,dockerfile, Images, Repositories.
- Implemented a Continuous Integration and Continuous Delivery (CI/CD) pipeline with Docker.
- Expertise in creating DevOps strategy in a mix environment of Linux (RHEL, CENTOS,) servers along with Amazon Web Services.
- Experience with container-based deployments using Docker, working with Docker images, Docker Hub and Docker registries.
- Experience in creating Docker containers leveraging existing Linux Containers and AMI's in addition to creating Docker containers from scratch.
- Set up a Kubernetes cluster using kubeadm and later migrated to AWS EKS for improved fault tolerance.
- Proficient in Bash scripting with a strong ability to automate system administration tasks, such as log rotation, database backups, and file transfers, resulting in increased efficiency and streamlined processes.
- Experience in working with Amazon Web Services (AWS), Creating EC2 Instances and configuring all web Services like EC2, S3 bucket, ELB, IAM through AWS Console.
- Designed and implemented container orchestration systems with Docker Swarm.
- Developed and executed Bash & Python scripts which automated.
- Utilized linux Admin skills on deployment servers to make sure the servers are running as expected

## PROFESSIONAL SKILLS

| | | |
|---|---|---|
| Linux - CENTOS - REDHAT UBUNTU | Docker - Docker Swarm | GIT - GitHub - jenkins |
| NFS - SAMBA - SSH - Telnet - FTP | Kubernetes | CI/CD pipeline |
| Apache - Tomcat | AWS-Azure | SSL |

## PROJECTS

**Extravis-Nets International**

**Deployment of a Unified Observability Platform**

- Spearheaded the deployment of MonetX, a unified observability platform that provides real-time performance monitoring and analytics for enterprise systems.
- Designed and implemented CI/CD pipelines using Jenkins and Docker Compose for automated builds, testing, and deployments.
- Ensured high availability and scalability by configuring Kubernetes clusters and leveraging AWS ECS for containerized application management.
- Optimized platform performance to handle a large influx of data while maintaining system reliability.

**Promoting Sustainable Data Centers**

- Deployed MapX, a tool designed to streamline operational workflows and improve deployment processes across different environments.
- Created Docker images and pushed them to Amazon ECR using Jenkins pipelines, enabling automated rollouts to AWS ECS.
- Utilized orchestration tools like Kubernetes to ensure high availability and fault tolerance during deployments.
- Enhanced operational monitoring by integrating custom dashboards for real-time status tracking.

**Streamlining Team Performance**

- Managed the development and deployment of SupportX, a platform focused on improving team performance through streamlined support processes.
- Designed and implemented CI/CD pipelines using Jenkins to automate build, testing, and deployment stages.
- Containerized the application using Docker and orchestrated deployments via Kubernetes on AWS EKS.
- Ensured compliance with CIS Top 20 Controls to maintain security and operational best practices across the platform.

**Access Rollout and Operation Tool**

- Deployed MapX, a tool designed to streamline operational workflows and improve deployment processes across different environments.
- Created Docker images and pushed them to Amazon ECR using Jenkins pipelines, enabling automated rollouts to AWS ECS.
- Utilized orchestration tools like Kubernetes to ensure high availability and fault tolerance during deployments.
- Enhanced operational monitoring by integrating custom dashboards for real-time status tracking.

**Forbmax**

**Deployment of Application in AWS ECS via CI/CD Pipeline**

Created a Docker image that automatically builds and pushes React and Django application to Amazon ECR. This was made possible by utilizing jenkins to create a CI/CD pipeline that automatically pulls into AWS ECR.

The workflow implemented Docker Compose to build an image and push the resulting Docker image to an AWS ECR registry via a CI/CD pipeline. The final step involved deploying the application to an AWS ECS cluster for efficient containerized application management.

**Deploying Applications with High Availability using Orcharaction Tool**

Configured Kubernetes clusters and deployed their application with high availability. This means that even if one node in the cluster fails, the other node will ensure that the application is always available. This is achieved through Kubernetes clustering and orchestration capabilities.In this project, I spearheaded the deployment and optimization of a two-tier application, comprising Flask and MySQL, to handle a load of 20,000 concurrent users. Leveraging AWS EKS (Elastic Kubernetes Service)

---

## PROFESSIONAL EXPERIENCE

**Extravis-Nets International - Islamabad** **2024- Present**

**DevOps Engineer**

Responsibilties:

- Managed deployments on AWS and Azure, ensuring optimal performance, cost-efficiency, and security across cloud environments.
- Implemented best practices for cloud cost management, achieving significant reductions in unnecessary cloud spending through detailed monitoring and optimization.
- CI/CD Pipeline Development and Automation:
- Developed and maintained Jenkins-based CI/CD pipelines, automating the build, test, and deployment processes for applications.
- Integrated pipelines with Docker to containerize applications, improving deployment speed and scalability.
- Orchestrated deployments using Kubernetes on AWS EKS, ensuring high availability and fault tolerance of applications.
- Utilized Terraform and Ansible for infrastructure-as-code (IaC) to automate provisioning and configuration management, ensuring consistency across all environments.
- Microsoft 365 Management:
- Managed the procurement, setup, and administration of Microsoft 365 services (email, OneDrive, Teams, etc.) for the organization.
- Ensured efficient communication and collaboration within the team and clients by maintaining uptime and access to Microsoft tools.

- Led the containerization of applications using Docker, enabling better scalability and resource management.
- Managed container orchestration using Kubernetes, ensuring high availability and reliability of services, and scaling applications as needed across multiple nodes.
- Managed and maintained various Linux-based systems, ensuring optimal performance and reliability.
- Configured and optimized servers for application deployment, monitoring, and scaling, ensuring minimal downtime and high availability.
- Applied patches, updates, and security configurations to maintain a secure environment.
- Administered Hyper-V and VMware environments, managing virtual machines (VMs), ensuring resource allocation, and optimizing VM performance for diverse workloads.
- Oversaw the deployment, maintenance, and performance monitoring of VMs, and provided proactive troubleshooting and optimization across virtualized environments.
- Configured and maintained Prometheus and Grafana monitoring solutions for real-time observability and performance metrics across the infrastructure.
- Deployed and managed the MonetX observability platform to improve data-driven decision-making and proactive system management.
- Collaborated with development, IT, and security teams to align infrastructure with application requirements and ensure seamless deployments.
- Provided support for enterprise applications, including Cisco and Mobily deployments, optimizing operations and troubleshooting when required.
- Worked on project management and optimization of systems to handle large workloads and improve service delivery time.
- Led initiatives to automate and streamline workflows, resulting in a 40% reduction in deployment time and increased operational efficiency.

**Forbmax - Islamabad** **2023- 2024**

**DevOps Engineer**

Responsibilties:

- Maintained and built AWS infrastructure and servers as part of the DevOps team.
- Responsible for the deployment of applications on various platforms.
- Managing process load and space issues at daily basis via shell scripting , like log rotation, database backups, and file transfers.
- Utilized Docker to write and manage custom Docker images and containers for various applications and services.
- Building Docker images through the utilization of a **docker-compose file**.
- Orchestrated Docker containers using **AWS ECS** , **Docker Swarm** , **Kubernetes** to achieve containerization of microservices architecture.
- configuring **Docker volumes** and **networks** for data persistence and inter-container communication.
- Implemented a **CI/CD pipeline** with Docker for streamlined software delivery.
- Demonstrated ability to configure, deploy, and scale applications in **AWS ECS clusters**.
- setting up **Kubernetes clusters** using kubeadm for local development and initial Deployment and EKS for Deployment
- Experienced in using **Ctop** and **docker stats** to monitor container metrics such as CPU usage, memory consumption, and network activity.
- Set up binding mounts to share data between the host system and the container, facilitating changes made in one to be reflected in the other.
- Launched and configured virtual instances on **AWS cloud** using EC2 service, including selecting appropriate instance type, setting up security groups and key pairs, and configuring storage and networking.
- Experience launching and configuring **EC2** instances, creating and managing AMIs, and setting up **AWS Load Balancers** to distribute traffic among multiple instances.
- Migrated production infrastructure into AWS utilizing **AWS Cloud formation**, Code Deploy, Ansible, and **EBS**.
- Created and managed S3 buckets and utilized S3 bucket and Glacier for storage and backup on AWS.
- Created AWS Route53 to route traffic between different regions.
- Increased EBS-backed volume storage capacity when the root volume is full using AWS EBS Volume feature.

**SAR ZONE - Faisalabad** **2022 - 2023**
**Linux Support Engineer**

Responsibilties:

- Installed and updated software and patches on servers running Ubuntu, CentOS, and Red-Hat Linux.
- Monitored logs and performed regular health checkups and housekeeping to ensure system stability.
- Scheduling jobs through **CRON.**
- Checked server uptime and login information to identify any issues.
- Configured IP addresses, IP aliasing, and resolved any networking troubleshooting.
- Created and deleted partitions in LVM, and created normal partitions in Linux.
- Managed user administration, including creation, modification, deletion, and permissions management.
- Installed and configured peripherals, components, and drivers to user standards.
- Conducted file system operations, including creating, mounting, unmounting, and removing files and folders.
- Configure **firewalld/IPtables** adding rules for incoming traffic.
- Used various protocols for file transfer, including: - **FTP - TELNET**
- Configured and managed various server types, including: - DNS server - Samba server - Apache server - Mail server.
- Configure real-time monitoring server **Zabbix** for server monitoring.
- Troubleshot various issues related to server configuration, including:- - Split DNS ,Samba configuration,Apache configuration,Mail server issues.
- Managing daily IT JIRA tickets regarding Linux related issues.

## EDUCATION

**University of Agriculture Faisalabad**

Graduation (Computer Science)

# To Whom It May Concern

This is to certify that **Mr. Abdul Muswar** S/O **Muhammad Saleem** bearing **CNIC#35101-9788979-9** has been working with **Extravis Private Limited** as **"DevOps Engineer"** from January 15, 2024 till now.

His job description and responsibilities included:

- Managing **Cisco and Mobily Deployments** to ensure seamless operations.
- Handling **AWS Cloud Cost Management** to optimize expenditure and improve efficiency.
- Automating infrastructure using **Ansible, Terraform, and Jenkins** to streamline processes.
- Designing and implementing **DevSecOps pipelines** to enhance security and compliance.
- Overseeing **Kubernetes and Docker Deployments** for containerized applications.
- Implementing the **CIS Top 20 Controls** to ensure a secure and compliant environment.

Throughout his time with us, Mr. Abdul Muswar exhibited excellent interpersonal skills and maintained a positive attitude,earning the respect and admiration of his colleagues and top management alike. His contributions were invaluable, and he played a pivotal role in the successful completion of several critical projects.

We wish Mr. Abdul Muswar the very best in all his future endeavors and are confident that he will continue to excel in his career. We have no doubt that he will be an asset to any organization he chooses to be a part of.

We wish him all the very best in all his future endeavors.

Thanks & Regards,

**Nayab Shinwari**
